Title : The Veterinary Congress of the Hungarian Academy of
Sciences

Orig Pub: Med. weteryn., 1955, 11, No 3, 186-189

Abstract: The Congress, organized by the Veterinary Committee of
the Division of Agricultural Sciences of the Hungarian
Academy of Sciences, took place on 1-3 March 1954 in
Budapest. Its goal was the discussion and evaluation
of the new trends in general zoo-hygiene, of the upkeep
and breeding of agricultural animals, of the prophylaxis
of parasitic diseases, and also of the development of
methods of control of tuberculosis in agricultural

Title : Experimental Treatment of Bulls Infected with
Trichomonosis.

Orig Pub: Med. weteryn , 1956, 12, No 3, 163-164.

Abstract: Good results were achieved in performing an irrigation of the prepucial mucosa and of the extracted penis with a 0.4 percent chloramine solution under a 4.5 atmospheric pressure. Conduction anesthesia in dorsalis penis was performed prior to this treatment. Of 55 bulls treated, 49 recovered after a single treatment, 3 of the bulls recovered after

AUTHOR: Görlich, P. and Hora, H.

TITLE: Measurements of polarization properties of compound photocathodes

PERIODICAL: Referativnyy zhurnal, Avtomatika i radioelektronika, no. 3, 1962, abstract 3-3-81ya (Festkörperphysik. Berlin, Akad. Verl., 1961, 290-299)

TEXT: Semitransparent photocathodes of the N12FS ($SbCs_3$) and N12F (Cs_2O)-type photomultiplier tubes of East German manufacture were investigated using a narrow monochromatic beam of linearly polarized light. The coefficient of polarization was measured, i.e. the ratio of the quantum yields for the light polarized in a plane perpendicular to the plane of incidence and for the light polarized in the plane of incidence. The spectral characteristics were obtained for the incident and absorbed light for various angles of incidence in relation to the cathode. It was shown that the earth

Card 1/2

Measurements of polarization....

S/194/62/000/003/034/066
D256/D301

magnetic field does not influence the quantum yields for all the frequencies of the investigated spectrum. A hypothetical model of the $SbCs_3$ emission mechanism was devised based on the observed increase of the coefficient of polarization with increasing the angle of incidence and the wavelength. The width of the forbidden band and the depth of the conductivity band in relation to the vacuum level were determined experimentally. The possibility is considered of explaining the polarization selectiveness by means of optical relations. The poor polarization dependence of the emission for Cs_2O is explained by the rough surface of the cathode as compared with the surface of the $SbCs_3$ cathode. It is assumed that the emission in Cs_2O occurs from the impurity levels and at the same time for the $SbCs_3$ cathode from the valence band. The possibility is considered of exciton mechanism of emission for $SbCs_3$. It is stressed that the photoemission of $SbCs_3$ cannot be explained by a simple photon-electron interaction. Abstracter's note: Complete translation.

Title : Magnetic Heat-Sensitive Materials and Their Use

Orig Pub : Elektrotechn. obzor, 1957, 46, No 10, 524-532

Abstract : The article contains an analysis of the temperature variations of the magnetic properties of ferromagnetic materials. The results of measurements of several specimens, particularly ferrites, are given. The author next explains the temperature changes of current and voltage in heat-sensitive chokes and transformers and also gives simple calculations for these effects. The properties of the heat sensitive chokes and transformers are estimated and the possibilities of their employment are discussed. Bibliography, 15 titles.

Vylucovani arsenu a BAL The elimination of arsenic and BAL Lekarske Listy 1948,
3/22 (533-536) Graphs 4 Tables 2

Arsenic injected as neoarsphenamine disappears quickly from the blood; after
12 hours it is not detectable. The elimination in the urine takes some days. After
the injection of BAL or sodium thiosulphate the elimination of As is accelerated.
